

## Community Based Sustainable Management of Medicinal Plants in Madhya Pradesh – Phase II

Investigator: **Bhattacharya, P**

*Sponsored by: International Development Research Centre (IDRC)*

The second phase of the project focused:

- To develop an enhanced model for promoting regeneration of MAP populations in local forests, that would focus on threatened and over-exploited species;
- Take into account gender-differentiated needs, roles and priorities;
- To explore options for formalizing an inter-connected IPR mechanism that recognizes and respects the traditional knowledge of local communities; and
- To explore options for introducing sustainable biodiversity-based livelihoods in the project area that would also lead to creation of an equitable partnership between producers and buyers.
